## ABOUT INDUSTRY

India is the 2nd largest producer of crude Steel, the largest producer of Sponge Iron or DRI in the world and the 3rd largest finished steel consumer in the world after China & USA.

India's steel production is expected to increase from **106.56 MT in FY19 to 128.6 MT by 2021.**

The current per capita consumption for finished steel products stood at **70.9 kg**, way below the world average of **224.5 kg**, which suggests that India has a huge unrealised potential for steel demand growth.

**Government of India is aiming to scale the Steel production upto 300 Million Tons and increase the per capita steel consumption upto 160 kgs by 2030-31 as per National Steel Policy.** The liberalization of industrial policy and other initiatives taken by the Government have given a definite impetus for entry, participation and growth of the private sector in the steel industry.

Indian Steel Industry is witnessing consolidation of players which will presents an opportunity for global players to enter the Indian Market, while the existing units are being modernized/expanded, a large number of new steel plants have also come up in different parts of the country based on modern, cost effective, state of-the-art technologies
